Hello,

I won't be able to make to class on Monday. I have to pick up a family member from the airport.

I finish the interface testing some of the stuff failed. I've upload the excel.

The application broke when i try to put in a different directory with .bmp images or .tif images. I created a test folder and added a test image extension .tif and another folder with .bmp

Gave me an error exception.

Another thing that broke was the Input of the base Needle

It let me enter negative number but generate different data..

It also let me enter decimal number but generate different data.

It also let me enter letters and gave me an unhandle excpetion.

every unhandle exception the application crashes.

I haven't got to the System testing because I don't know how to create test cases for them. It would be nice if yall help me out.

Take a look at the test cases see what passed and failed.

There is two sheets interface and system test cases.

Thanks,

Hieu
