Holy crap that extra test data is taking forever to download to my local fork. Waiting til it's done to push my changes to the **Final Draft of the Requirements** and my **Initial Draft of the Planning Document**.

I think we should have one of the review thingys Stringfellow was talking about on Wednesday when she will give us all that time, and hopefully do enough editing and checking that we can print it off and give her both documents that day.

I did not do the schedule stuff (section 5) (i.e. Gantt chart, timeline, network diagram) Hoping one of yall can, because I don't know what the individual tasks should be, the order, or the amount of time we want to devote to them, and then add them as appendices to the plan document.

So hopefully someone wants that responsibility. Just let us know who's going to do it, so we can be ready for wednesday.

Feel free to make changes once I get my latest stuff on Github. :)

I did a little bit of organization, and changed the objective grading sheet to accomodate 5 ppl, so I change the totals, so there is 500 total points instead of 400, (I think that's what we're supposed to do).

Did a little bit of assessment of effort so far, feel free to change. I don't mind. We're supposed to be objective and all.

Ok, that's all from me. Go A team!

I'll finish up the Initial Draft of the Planning. Since I won't be coding much.

I finish the project planning. Take a look.
It is also on git hub.

This is what I talked about for unit testing. Instead of the third party N Unit. Simple and easy to use.

Also I'm using this at work. open source for .Net developer
